

Dr. Peter Wilson
Emeritus Reader in Quaternary Environmental Change
School of Geography and Environmental Sciences
Ulster University
Coleraine
Co. Londonderry BT52 1SA
Northern Ireland

Dr Peter Wilson continues to research the landforms and landscapes of mountain areas in Ireland, Britain and Norway, in spite of having retired from his University position in 2016. He is particularly interested in landscape changes brought about by glaciation and earth surface processes that have operated since the ice departed, in particular landslides, peat bog evolution, seasonal frost processes and coastal sand dune development. He has over 300 publications that deal with these aspects of physical geography / environmental science.
